

## Buggy about Learning!

Kindergarten students will learn about a variety of critters including meal worms, ants, praying mantis, and more! Learning about bugs is an exciting way to study bugs' body parts, their needs, and adaptations. Students love to extend what they are learning about and would be able to learn about bugs in a whole new dimension if they had:

Meal worms, ladybugs, praying mantis, ants, caterpillars, and materials for their habitats

Students will take their learning outdoors as they study the lifecycle of butterflies using a butterfly pavilion. Students will go on a bug hunt to collect samples for observations of what insects need to survive. Students will engage in many real-life experiences through the use of these much needed materials!
